APOGEE)X

More power to meet today's printing workflow challenges

AGFA 

| see more | do more |

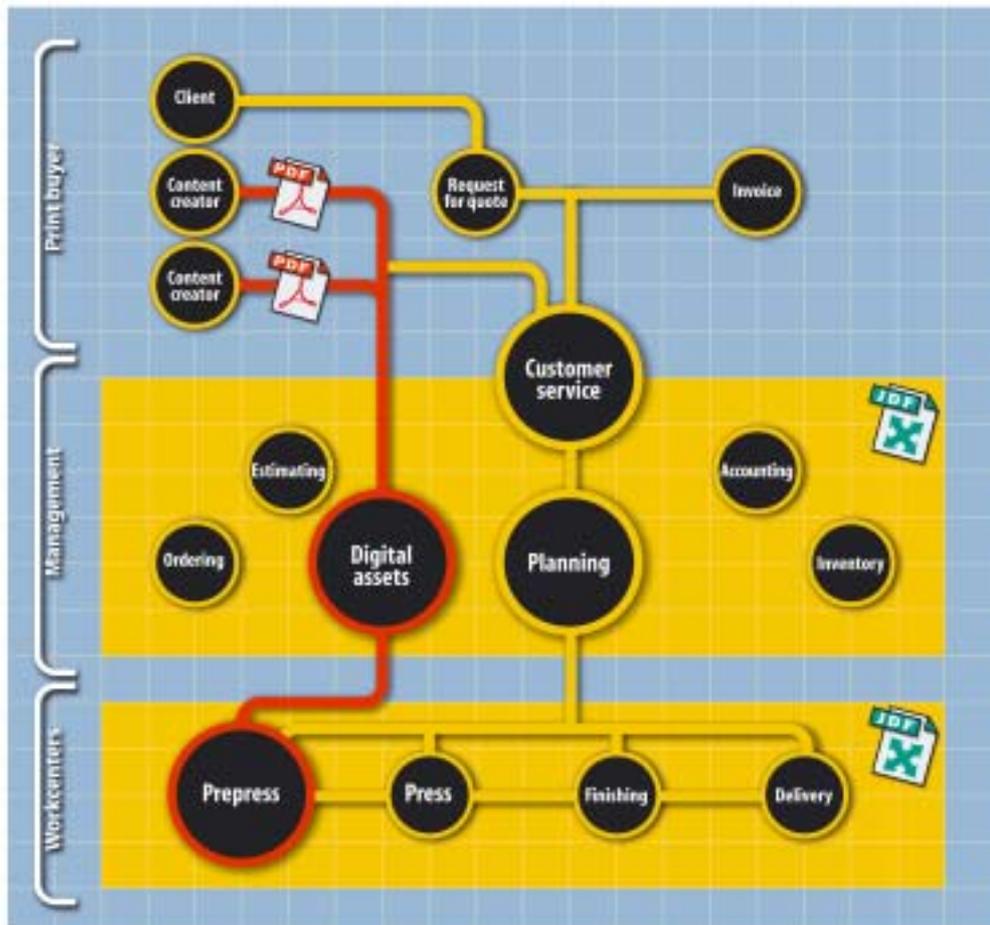

Are you ready for today's workflow challenges?

Today's prepress and printing professionals face tough challenges. How can you stay profitable when press runs are shorter and turnaround is faster than ever? What's the best way to manage your increasingly complex digital workflow? How can you keep the whole production team communicating and collaborating? Are you keeping pace with all prepress technologies? Do you have the tools you need to succeed in a fiercely competitive environment? How can you control costs and increase profit margins?

If questions like these sound familiar, Agfa has the answer—ApogeeX, a complete, integrated digital workflow solution that helps you redefine and streamline your prepress workflow like never before. It's the most automated, easy-to-use workflow application on the market, putting more control and advanced capabilities

at your fingertips. It leverages the latest workflow technologies and standards—including PDF and the emerging Job Definition Format (JDF)—to enable your business to succeed. With ApogeeX, prepress houses, commercial printers, and packaging printers can complete more jobs in less time, raising profitability.

ApogeeX encompasses your entire prepress workflow, bringing new productivity to your workcenters, new capabilities to your people, and new efficiency to key business processes. ApogeeX taps the power of JDF technology to link critical areas of your organization and streamline communication and collaboration throughout your entire operation.

ApogeeX taps the power of PDF and JDF technology, as well as the Web, to bring you a new vision of workflow—one designed to help keep your business competitive and successful.

Workflow is an evolving story

To appreciate the full impact ApogeeX can have on your efficiency—and your bottom line—it's important to recognize that the definition of workflow is changing. Now workflow means much more than prepress operations. It encompasses the entire production cycle, from the time a customer places an order to the final delivery of the printed materials. The workflow team includes many people, from the content creator to customer service representatives to prepress specialists to printers, including remote sites. And your digital workflow must communicate with the many systems and technologies in use within your environment.

Your workflow challenges are unique to your organization. But all prepress and printing professionals share a common need for more control, more precision, and more automation throughout the entire workflow. Only then can your business stay profitable, competitive, successful, and ready for the future.

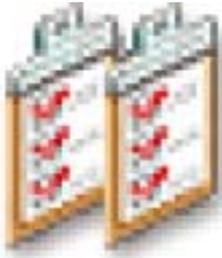

Key areas that make a difference

At Agfa, we take a broader view of workflow, one that encompasses every aspect of your operation—from estimating incoming jobs to final delivery. We apply our expertise to key areas—such as your prepress operation—where maximum efficiency is crucial. But our vision of workflow goes beyond prepress.

We supplement ApogeeX's advanced prepress workflow with Agfa Delano, a powerful software solution that puts a set of innovative project management tools in the hands of your customer service representatives (CSRs). Agfa Delano streamlines and automates the planning, staffing, scheduling, and tracking of print and publishing products and projects. And it integrates seamlessly with ApogeeX, creating a new definition of workflow efficiency.

To meet today's workflow challenges, you need a partner with a broad view of workflow, proven expertise, and the advanced tools necessary to make your workflow as streamlined as possible. You need a more intuitive, dynamic, flexible, scalable, and connected workflow solution. You need ApogeeX—from Agfa, the digital workflow leader.

Streamlining your entire workflow with more capabilities, more power

Many organizations that are considering a move to an all-digital workflow have been daunted by the complexity and expense of workflow solutions on the market. Now ApogeeX brings you a comprehensive, all-digital, fully integrated workflow solution. ApogeeX brings together a wide range of sophisticated, but easy-to-use capabilities in one application—including job management, advanced job tickets, PDF trapping, enhanced connectivity to other systems and devices, Web approval of pages and imposed flats, and much more.

Other solutions require you to patch together different products to get a complete solution. Not ApogeeX. It takes a comprehensive approach, integrating key workflow tools in one application, one interface, one database. It's that simple.

ApogeeX brings everything you need to streamline your workflow—from normalizing incoming files into PDF Digital Masters to creating Digital Film (screened bitmaps) and managing its output to a wide range of devices, including proofers, imagesetters, platesetters, and more. And every element of ApogeeX is designed for top performance, constant availability, and unbeatable reliability.

Taking the work out of workflow ApogeeX uses icons and an extremely visual design approach to make it easy to achieve an automated workflow. Operators quickly master ApogeeX—even if they have never used a workflow solution before. For example, you get a range of job ticket templates with ApogeeX, and modifying them or creating your own job tickets is a simple, drag-and-drop process. Intuitive user interfaces make it easy to monitor and control your workflow. And ApogeeX's unique scheduler automatically determines how jobs should flow through the system for fastest processing and highest efficiency.

ApogeeX brings you a winning combination of the key capabilities you need to succeed in today's competitive environment. From sophisticated job management to advanced job ticketing, ApogeeX is an integrated solution that gives you everything you need to bring new efficiency to your workflow — and new profits to your bottom line. At every level, ApogeeX is designed to bring you more.

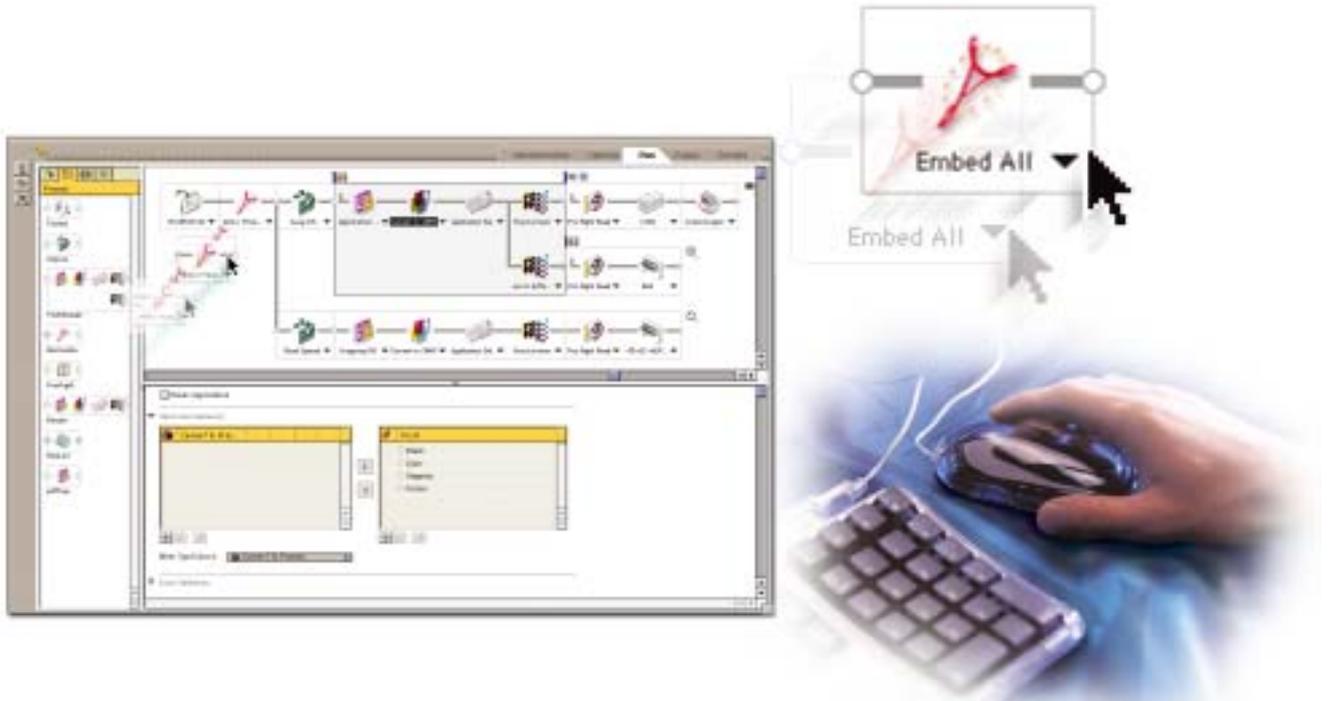

More intuitive

ApogeeX is a highly visual, intuitive application designed to be used by a wide range of operators. It empowers your team with advanced tools that are easy to learn and use.

More dynamic

ApogeeX lets you create flexible workflows that respond to the ever-changing needs of your business. In a business where constant change is inevitable, ApogeeX keeps you ready for anything.

Tapping the power of the Web ApogeeX's integrated Web approval tool enables clients to approve or reject pages and fully imposed flats via their Web browser. In addition, they can upload revisions or new PDF pages. And ApogeeX keeps track of all events and communicates them to the operator via its sophisticated messaging system—keeping everyone up-to-date.

More than a workflow tool Web-enabled features are just one example of how ApogeeX uses advanced technology to extend control and maximize automation throughout the entire prepress workflow. With ApogeeX, your organization gains more than a powerful software tool—it gains a business advantage. Because a streamlined, well-managed workflow means higher profits—now and far into the future.

More control

ApogeeX gives you the advanced tools you need to manage and track every job—offering a new level of control over your entire prepress workflow. You get a complete overview via one window, giving you full control over all processes and jobs enabling you to respond to changing priorities.

More scalable

ApogeeX is an extremely scalable, flexible solution that grows with your organization. You can tailor your ApogeeX system to respond to your evolving business needs, growing and adding new capabilities and processing power as needed.

More connected

ApogeeX connects people, processes, and devices like never before. JDF compliance lets you import job tickets and key information. And ApogeeX connects seamlessly with the Web for approvals, and remote printing sites for distribute and print operations.

Keeping your business ready for more growth

Every prepress and printing organization is a unique combination of people, equipment, technology, workflow, customers, and applications. To meet the diverse workflow needs of today's marketplace, ApogeeX is designed to be exceptionally flexible and scalable. It brings new automation and control to commercial and packaging printers, service bureaus, prepress houses, and other groups in the graphic arts. It's designed to fit seamlessly within small and large organizations, simple and complex workflows, one site or many. If you have a digital prepress workflow, then ApogeeX can make a real difference in your productivity and profitability.

An advanced architecture at the core Apogee's client-server architecture provides centralized processing and control and ensures high performance and reliability—important considerations since your workflow is central to your business success. Redundant, distributed task processors and built-in intelligence (i.e., automatic switching to available processors in case of a failure) ensure high availability and quick recovery, while sophisticated database back-up plans protect your valuable data.

The ApogeeX client application graphically displays all job information, regardless of where the job-specific processing occurs. This networked approach keeps resources (i.e., ICC profiles, fonts) centralized and makes it easy to bring updates and new capabilities to your entire operation. As a result, any changes made to settings or its capabilities are automatically communicated to all operators—a significant improvement over standalone applications.

ApogeeX is a flexible solution that lets you meet your needs today, then grow and evolve in the future. Add more processing power. Provide new capabilities. Go after new markets. It's all possible with ApogeeX—a cost-effective workflow solution that gives you more.

This client-server architecture also lets you define what each user can do and see—all from one central point of control. Now you can control the features and views available to every user, setting specific access levels appropriate for each user. ApogeeX puts you completely in charge of your workflow and your organization—allowing you to get the best possible results. Plus, users get quick access to the latest features and views, enabling them to do more in less time.

Scalability for the future

ApogeeX is an extremely scalable, open solution that makes it easy for your workflow to grow and evolve. You can add extra servers, client workstations, and new processing power (e.g., additional preflight processors or trapping processors) to keep pace with your needs. And you can add new output devices (e.g., digital proofers) or output to remote devices as film and platemaking move closer to the press—thanks to remarkable openness and flexibility.

This cost-effective approach lets you get the workflow solution that matches your needs today, and expand as necessary. In short, ApogeeX gives you the flexibility that you need to grow without limits, to enter new markets, and to stay profitable—all with complete confidence in your digital workflow.

ApogeeX is designed to meet the workflow challenges that prepress groups, commercial printers, and packaging printers face every day.

When creating ApogeeX, we drew upon our extensive knowledge of real-world prepress environments—including input from our thousands

of Apogee users—then designed a flexible solution that provides high productivity, exceptional control, and remarkable ease of use.

ApogeeX brings new automation and efficiency to packaging printers—supporting step-and-repeat and nesting applications, post-rendering step-and-repeat raster assembly, integrated proofing, and more. Its user interface provides dedicated packaging terminology for maximum ease of use. And ApogeeX is the first

PDF-based packaging workflow solution to use JDF data for greater automation.

ApogeeX imports packaging JDF files that include artwork, color strips, markers, customer information, and step-and-repeat positioning parameters. ApogeeX then processes these jobs according to the embedded JDF specification. To ensure that

each step or nested artwork is identical, you can first render one artwork and then step it according to the JDF specification by using ApogeeX's post-render, step-and-repeat component.

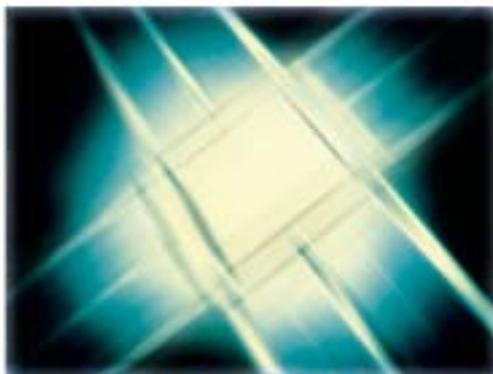

For today's packaging applications, ApogeeX brings more tools, more automation, and more productivity.

A closer look at ApogeeX

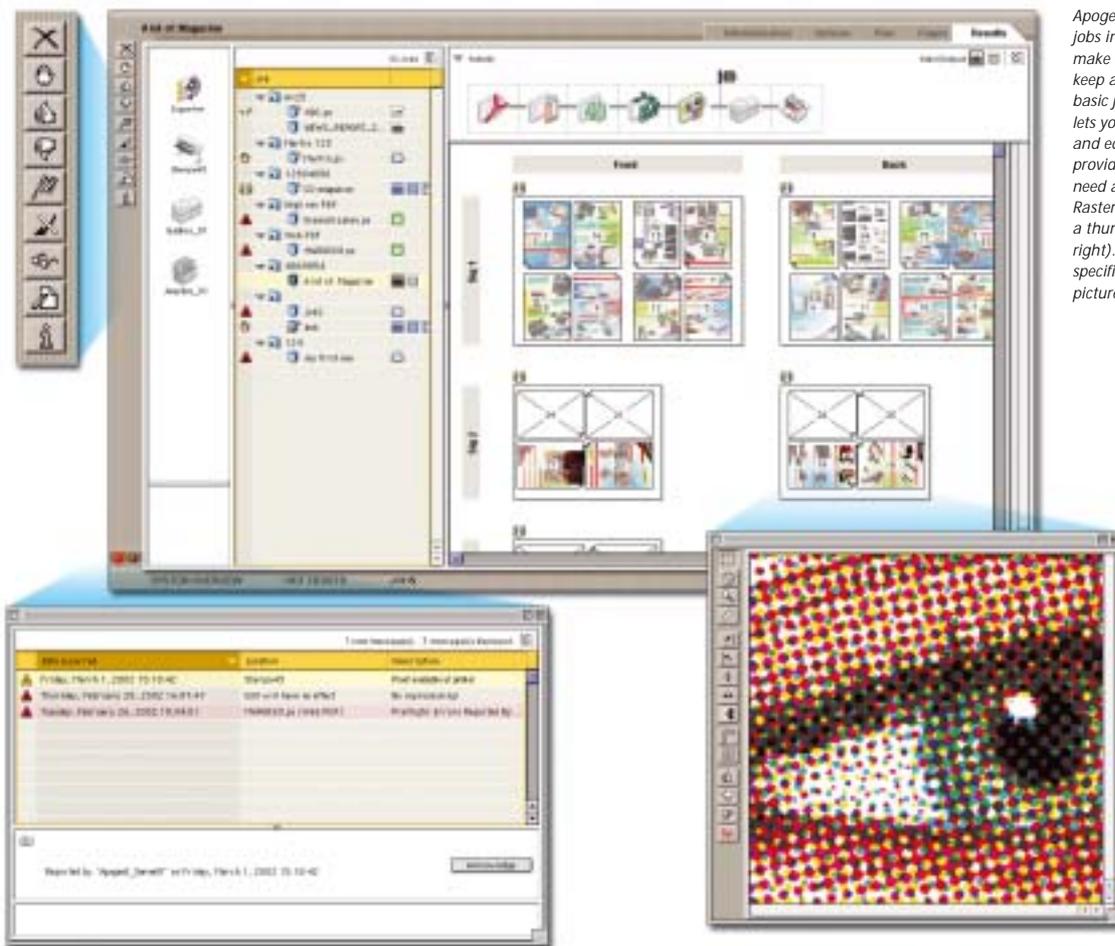

The prepress and printing professionals around the world who use Agfa Apogee every day report one clear impression—it's a powerful business tool that helps them enhance their business, stay competitive, and increase revenues. ApogeeX takes workflow even further, ensuring that ensure top quality and maximum efficiency—every job, every shift. The bottom line? You can automate, control, and coordinate your workflow, or extend your business opportunities by using ApogeeX for both commercial and packaging applications.

New workflow challenges demand new workflow tools. ApogeeX has them all. Here we take a closer look at job management, ticket editing, connectivity, output management, and system management.

Job management: Giving you more control

ApogeeX lets you see the status of all jobs in one window, enabling you to make decisions, change priorities, and keep all jobs moving ahead. A toolbar of basic job management tools (upper left) lets you set priorities, and approve, reject, and edit jobs. A special message board provides information about jobs that need attention (lower left), while the Raster Preview feature lets you click on a thumbnail to take a closer look (lower right). And you can filter messages by specific operator, giving you a clear picture of all job-level activity.

ApogeeX gives you a complete, high-level overview of your workflow. In a single window, you can see the complete list and status of jobs in the system and available output devices, as well as a message board that keeps all users up to date about jobs that require attention.

From this overview level, ApogeeX enables you to filter the job list to take a closer look at detailed, job-specific views. Here you can track progress and activity, get information about specific processing parameters, and much more. ApogeeX's extensive job management gives you complete control over every job—letting you respond to every possible situation. You can designate priority handling for rush jobs, put jobs on hold, approve or reject jobs, assign them to later shifts, and resubmit jobs. Best of all, controlling and managing jobs is easy.

Managing Digital Film

ApogeeX also lets you manage Digital Film. It's powerful preview lets you inspect rasterized jobs, checking the trapped, imposed, and screened bitmaps before committing to imaging a proof, film, or plate. And ApogeeX streamlines remakes of film, proof, or plates.

Ticket editing: Making job tickets easy

Efficient, complete job ticketing is at the heart of ApogeeX—providing a more efficient electronic replacement for traditional job jackets or folders. You can import job tickets via JDF, retrieve them from a job ticket database of templates, or create new ones. In each case, ApogeeX makes job ticket creation and editing as easy as possible.

JDF-compliant job tickets

ApogeeX's next-generation job tickets tap the power of JDF—an open standard from the CIP4 consortium aimed at expanding and streamlining workflow. JDF is an XML-based file format that serves as an industry standard for an end-to-end job ticket that covers the entire workflow—from a customer's order to delivery of printed materials. Agfa helped develop the JDF standard in partnership with other industry leaders. Now ApogeeX puts it to work, expanding the power of job tickets.

With ApogeeX, jobs move through the workflow extremely efficiently and reliably. You can designate Hot Tickets that automatically process incoming files (Postscript/PDF/EPS). ApogeeX can even automatically notify you when a job reaches a key milestone, or if it is being held. This proactive approach lets you interact with your automated jobs, keeping your workflow moving and avoiding delays.

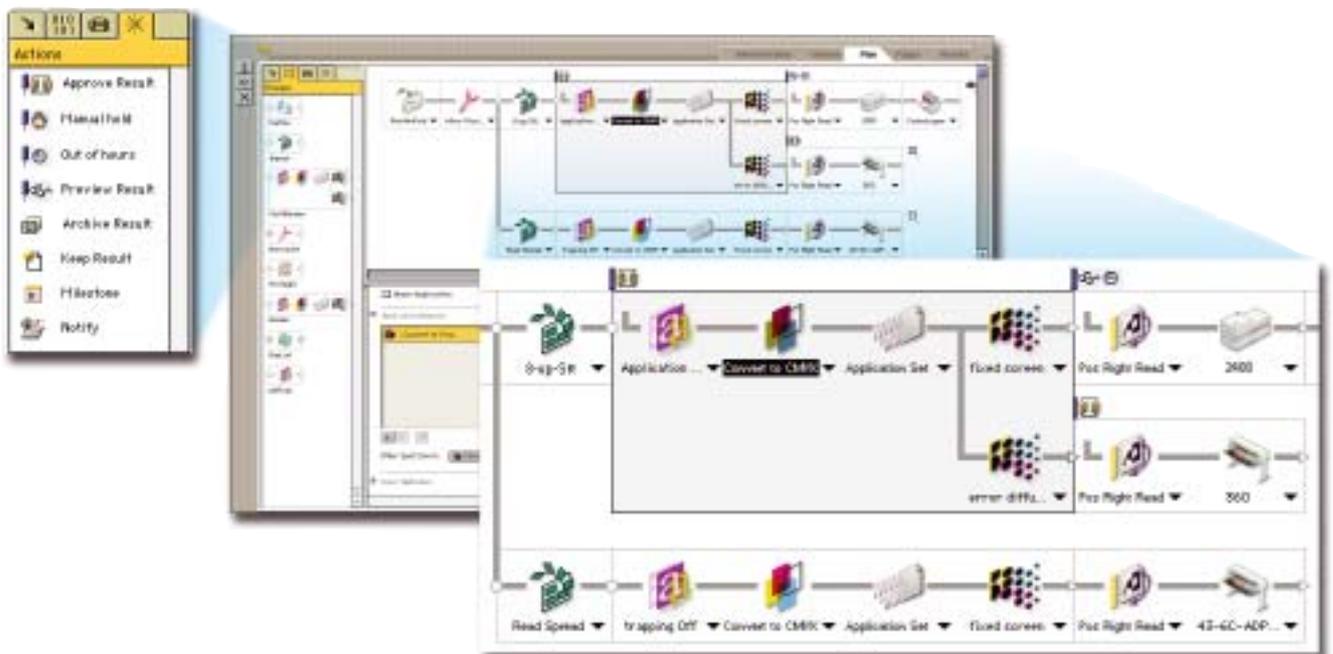

Complete production plans

With ApogeeX, creating a job ticket is an interactive, flexible process that lets you define a complete Production Plan—which includes all task processing steps, such as normalizing, pre-flighting, PDF trapping, imposition, rendering, step and repeat/nesting (for packaging workflows), and integrated proofing. You simply designate all of the specific parameters in your Production Plan, and ApogeeX does the rest.

Multi-flow capabilities

ApogeeX puts you in control of multiple input flows, multiple output devices (i.e., proofing, high-resolution imaging), and more—all from one Production Plan. After all, your operation doesn't have one workflow—it has many, depending on the job, the output device, and other variables. Now with ApogeeX's multi-flow capabilities, you can define these multiple workflows in one efficient, complete Production Plan and job ticket.

ApogeeX's advanced job ticketing lets you designate the specific actions that you want to apply to each job. You get precise control over the flow of job data throughout the Production Plan. And you can track results at every stage in the process.

Connectivity: Keeping your workflow open

Using JDF and ApogeeX's inherent openness, you can connect to other key groups and systems—including your clients, the pressroom, your MIS or production planning system. Its client-server architecture centralizes processing for higher performance, while connecting multiple users on one server over the network. This open, distributed approach keeps your entire operation communicating and collaborating quickly and easily.

More connectivity means your workflow is open, dynamic, and efficient, since you can connect to the people and resources you need. From the start, ApogeeX is an open solution designed to accept a wide range of incoming files—including production-ready PDF files, copydot files (screened DCS or 1-bit TIFF), and files from other sources. This open approach helps ensure a seamless fit with the way you are currently working.

Using JDF compliance for connectivity JDF compliance makes it easy for you to connect to existing databases of job tickets. It also lets you link key departments with the prepress workflow. You can describe processing parameters in your MIS system, then export complete job tickets that contain all instructions for the entire workflow directly into ApogeeX. Now your MIS and production planning systems can be more connected than ever, linking the "islands of automation" that exist within most organizations. The outstanding connectivity and openness of ApogeeX makes this integration happen.

Connecting to clients via the Web
By providing remote access via a Web browser, ApogeeX's Web approval tool shortens the approval cycle of pages and imposed flats—speeding jobs toward completion. ApogeeX records and displays all customer decisions and actions, letting you manage jobs better than ever.

Driving your current devices
ApogeeX connects seamlessly with your current imaging and proofing devices (including Agfa and non-Agfa devices) by exporting TIFF files. In this way, ApogeeX lets you leverage more return from your current investment in prepress technology. Staying efficient all the way to the press.

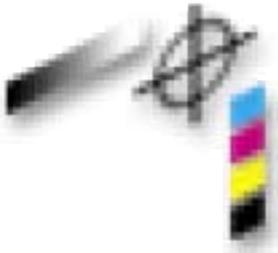

Agfa helped create the powerful JDF standard, a comprehensive, XML-based file format for end-to-end job tickets and much more. JDF streamlines the exchange of information between different applications and systems, making it easier for your entire operation to communicate and collaborate.

CIP4 is a worldwide operating standards consortium that serves as an impartial resource for developing, approving, and implementing standards—including JDF—in the prepress and printing industries.

ApogeeX leverages the power of the Web to speed client approvals—enabling you to complete more jobs in less time. A special Web approval tool lets clients view and approve pages and imposed flats via their Web browser. With ApogeeX and its Web approval tool, your clients get a convenient way to approve their jobs, while your business benefits from faster approval cycles.

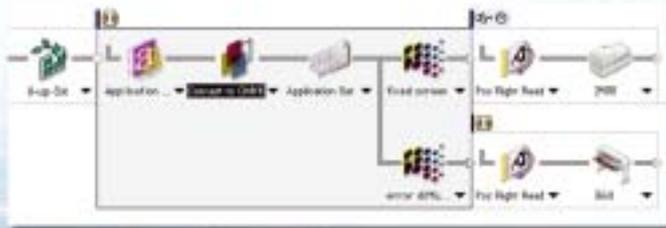

Output management: Maximizing predictability and performance

One of the key strengths of ApogeeX is its ability to automate and manage output of jobs to a wide range of devices. It's a comprehensive output management solution that gives you the flexibility you need to make last-minute changes, reorder pages and imposed flats (both PDF and Digital Film), create accurate proofs, redirect jobs to different devices or sites, and much more.

With ApogeeX, you get a full range of tools to help make outputting jobs easier, faster, and more automated—while maintaining the highest levels of predictability and performance. ApogeeX lets you output from both PDF Digital Masters or Digital Film (screened bitmaps), allowing for quick remakes, as well as enabling distribute-and-print operations. With ApogeeX, you can perform raster and contone softproofing—all aimed at ensuring the consistency and quality of every job.

One job ticket, many output options
ApogeeX's complete output management capabilities ensure consistent output across a wide range of high-resolution devices (image-setters, platesetters), as well as proofing solutions (Agfa Sherpa family). With ApogeeX, one job ticket can do it all, enabling you to output to multiple devices consistently. And you can create multiple language editions or alternative versions from the same job ticket. At every stage, ApogeeX lets you control and manage your output for predictability and performance.

Work with flats, pages, or artwork
Apogee lets you work with flats, pages, or artwork depending on your needs. Pages are assembled and artwork stepped and nested late in the process, giving you tremendous flexibility when handling late arrivals, last-minute content changes, or last-minute press or engine changes.

Integrated digital proofing

ApogeeX uses the same renderer for outputting to both high-resolution devices and generating proofs. The render-once option lets you create high-resolution files and proofing files in a single pass, boosting throughput. ApogeeX supports a wide range of proofing devices, including the Agfa Sherpa family of high-resolution digital proofing solutions. Now you can achieve high-quality, integrated digital proofing—a critical step in any all-digital workflow.

Managing color

Color management—controlling color across all output devices—is crucial for a successful digital workflow. But it can be a major challenge. For example, how can you ensure that your proofer matches the color characteristics of a specific press? With ApogeeX, you can proof on both the page and imposition level, ensuring predictable, consistent output.

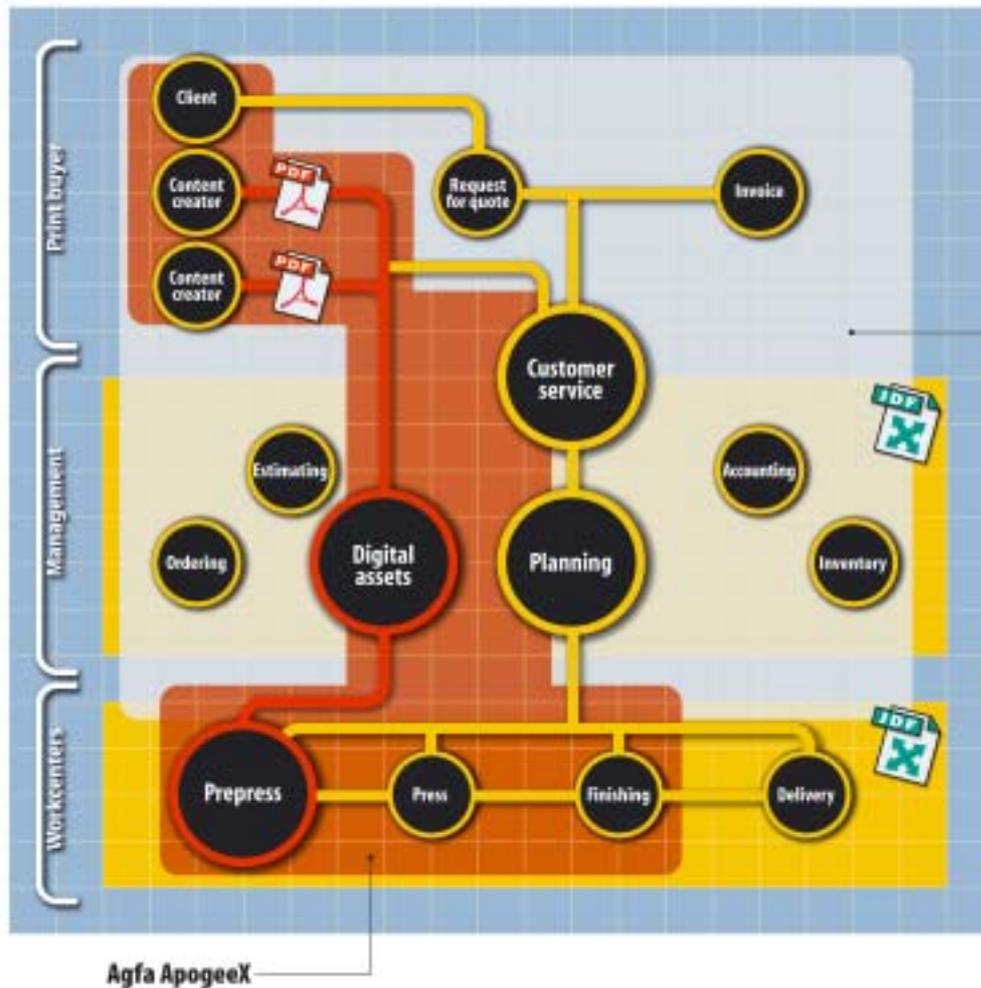

Thanks to Agfa's color management expertise, you can create extremely accurate press proofs—providing your clients a precise view of the results they can expect on press. ApogeeX's built-in QMS technology enables you to ensure consistent, repeatable color across your entire workflow, giving you complete confidence in every job, even those output remotely.

Advanced screening

Agfa is a leader in screening technology, and brings this expertise to ApogeeX. ApogeeX supports Agfa Balanced Screening, Agfa CristalRaster™ stochastic screening, and Agfa Sublima™ hybrid screening—providing options for proven, high-quality screening.

ApogeeX integrates proofing with your digital workflow like never before. It lets you render a file once, then output it to your proofer and your high-resolution device (i.e., your platesetter), boosting throughput and providing accurate proofing of every job.

The right choice for efficient, all-digital workflow

ApogeeX and Agfa Delano streamline the key areas of your business where maximum efficiency can make a real impact. ApogeeX streamlines your prepress workflow, bringing new power and speed to critical prepress processes—from content creation to managing output (red section). Agfa Delano provides fully automated project management tools that let you manage jobs like never before (light gray section). Agfa Delano and ApogeeX are thoroughly integrated, enabling information to flow seamlessly between them via JDF job ticket technology. When you combine the complementary strengths of ApogeeX and Agfa Delano, you get a comprehensive workflow solution that streamlines your entire operation—helping you raise efficiency and profitability to new heights.

Agfa Delano

Agfa is the world's largest prepress solutions provider—bringing a wide range of solutions to printers throughout the world. To these customers, we serve as a proven partner, providing computer-to-plate, computer-to-film, a full range of plates and consumables, digital workflow, digital proofing, and more. Our thousands of customers around the world—including the influential Apogee User Group—provide valuable insights into the evolving needs of today's prepress and printing groups, enabling us to create best-in-class workflow solutions.

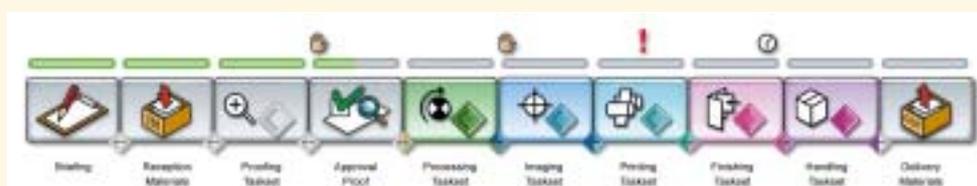

Agfa Delano: A key part of Agfa's vision of workflow and management
 Agfa Delano is the first project management software to bring the highest levels of automation to the prepress, printing, and publishing industry. With Agfa Delano, you can ensure a smooth flow of job information from initial creative idea to final product.

Agfa Delano complements ApogeeX by organizing and automating planning, staffing, scheduling and tracking of print and publishing products and projects. It provides realtime information on the status of all projects at every stage—first customer contact, prepress, printing, post-press activity, and workflow analysis.

Teams and customers share a virtual workspace—Agfa Delano World—where they inspect, track, preview, review, proof (remote or on-site), and approve all production-related information in realtime. All information is gathered in an intelligent, JDF-enabled Digital Job Bag, which can be used for production analysis—establishing

best-in-class workflows, creating full job descriptions, automating re-runs of jobs, and generating more accurate invoices.

Using graphic icons and an intuitive user interface, Agfa Delano helps customer service representatives and production managers create and fine-tune best-practice workflows—reducing errors, increasing productivity, strengthening business relationships, and improving turnaround.

A proven partner for advanced workflow solutions... and more

ApogeeX enables you to create the most efficient, well-managed, all-digital workflow possible.

Its open architecture ensures smooth integration with your existing design, prepress, printing, and finishing hardware and software—as well as a smooth growth path. With ApogeeX, you can build an efficient digital workflow that matches your specific needs and applications today, and that grows with your organization in the future.

A commitment to digital workflow

We realized years ago that an efficient workflow is the key to success at any prepress or printing operation. We pioneered PDF-based workflows, and helped make PDF the standard for efficiency. As digital workflows have evolved, Apogee has grown more powerful, more capable, and more advanced. Our workflow team continually innovates, bringing new capabilities to our proven, award-winning Apogee workflow solution. ApogeeX is the latest proof of our long-term commitment to advanced workflow technology — bringing new ease of use,

flexibility, and power to your prepress or printing operation. With ApogeeX, you get more than an efficient, automated workflow. You get the ability to grow and become more profitable.

A reliable, long-term partner

In an era of consolidation and constant change, you can rely on Agfa to provide the advanced technology, expert advice, and responsive support that you need. We're committed to enabling your business to grow and succeed—today and far into the future.
